

# SyphonCast v1.0

SyphonCast is an app created in Vuo 2.0.2, it looks at the primary and secondary displays connected to your Mac and allows the user to choose which display they would like to screen mirror over to Syphon. SyphonCast appropriately scales the resulting image to the chosen broadcast resolution chosen. By default the settings are Primary Display at 1080p resolution.

## Shortcut Keyboard commands

*(The shortcut keys only work if the app is selected in the dock)*

[Shift] + [1]	Primary Display*
[Shift] + [2]	Secondary Display
[Shift] + [Space]	Cycle Through Resolutions (1080p*, UHD, 4K, 720p)

\*Default on start-up

I created this app to use with NDISyphon to allow me to broadcast my displays over the network to another computer.
